

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended): A glass-ceramic plate, comprising at least one enamel patch and/or at least one coat of paint on at least one face of the plate, wherein the plate comprises a glass-ceramic obtained from a glass having the following composition expressed in percentages by weight:

|                                    |                |
|------------------------------------|----------------|
| <u>SiO<sub>2</sub></u>             | <u>63-70</u>   |
| <u>Al<sub>2</sub>O<sub>3</sub></u> | <u>18-22</u>   |
| <u>Li<sub>2</sub>O</u>             | <u>2.5-4.5</u> |

and wherein the glass-ceramic has an L\* value of between 82 and 87, an a\* value of between -3.0 and -0.5 and a b\* value of between -4.0 and +4.0.

2. (Previously Presented): The glass-ceramic plate as claimed in claim 1, wherein at least 40% of the surface of the at least one face is covered with the at least one enamel patch and/or the at least one coat of paint, and if the plate comprises functional and/or decorative areas, said at least one enamel patch and/or said at least one coat of paint optionally do not cover the functional and/or decorative areas.

3. (Previously Presented): The glass-ceramic plate as claimed in claim 1, wherein the plate comprises a transparent or translucent glass-ceramic and the plate comprises the at least one coat of paint and the at least one coat of paint is on the lower face of the plate.

4. (Previously Presented): The glass-ceramic plate as claimed in claim 1, wherein the plate comprises the at least one coat of paint and the paint has a degradation temperature greater than 350°C and the paint optionally comprises pigments.

5. (Previously Presented): The glass-ceramic plate as claimed in claim 1, wherein the plate comprises the at least one coat of paint and the paint comprises at least one silicone resin.

6. (Previously Presented): The glass-ceramic plate as claimed in claim 1, wherein the plate comprises the at least one enamel patch and the enamel patch is on the upper face of the plate.

7. (Previously Presented): The glass-ceramic plate as claimed in claim 1, wherein the plate comprises a glass-ceramic having an expansion coefficient of less than  $15 \times 10^{-7} \text{ K}^{-1}$ .

8. (Previously Presented): The glass-ceramic plate Glass plate according to claim 1, wherein the plate comprises a transparent or translucent glass-ceramic.

9-10. (Canceled).

11. (Previously Presented): The glass-ceramic plate as claimed in claim 1, wherein the plate comprises a glass-ceramic having a haze of at least 50%.

12. (Previously Presented): The glass-ceramic plate as claimed in claim 1, wherein the plate comprises an underceramized glass-ceramic.

13. (Previously Presented): The glass-ceramic plate as claimed in claim 1, wherein the at least one face of the plate comprises regions not coated with said at least one enamel patch and/or at least one coat of paint.

14. (Previously Presented): The glass-ceramic plate as claimed in claim 13,

wherein the lower face of the plate comprises at least one coat of an index resin in the regions intended to face at least one display.

15. (Previously Presented): The glass-ceramic plate as claimed in claim 1, wherein the plate is combined with underlying induction heating elements.

16. (Previously Presented): A process for manufacturing the plate as claimed in claim 1, comprising:

carrying out at least one glass plate ceramization cycle,

coating at least one of the faces of the plate with at least one enamel patch before the ceramization cycle and/or with at least one coat of paint after the ceramization cycle.

17. (Previously Presented): The process as claimed in claim 16, wherein a glass composition capable of producing a plate having a haze of at least 50% is used and utilized in the ceramization cycle by lowering the ceramization hold temperature by 10 to 60°C.

18. (Previously Presented): The process as claimed in claim 16, further comprising:  
baking the plate by heating the plate at temperatures of between 80 and 450°C for a few tens of seconds to a few tens of minutes,

wherein said baking is carried out during the ceramization if the plate comprises the at least one enamel or after the ceramization if the plate comprises the at least one paint, and

optionally depositing an index resin after ceramization and baking of the paint on the plate in the uncoated areas wherein at least one display is located, and

optionally drying the resin in the open air.

19. (Previously Presented): A device for cooking and/or holding at high temperature, comprising the glass-ceramic plate as claimed in claim 1, and a material selected from the

group consisting of one or more heating elements, one or more air burners, one or more gas burners, one or more induction heating means and combinations thereof.

20. (Previously Presented): The device as claimed in claim 19, wherein the plate is mounted on an insulating support without an intermediate complex intended for masking the inside of the device from the view of a user.

21. (Previously Presented): The glass-ceramic plate as claimed in claim 6, wherein the at least one enamel patch is a single colored enamel patch, the thickness of the enamel patch is less than 5  $\mu\text{m}$ , and if the plate comprises functional and/or decorative areas, the single colored enamel patch optionally does not cover the functional and/or decorative areas.

22. (Canceled).
